

SP6136 Converts 5.25V to 1.2V at 5A

Date: June 15, 2006

Designed by: Shahin Maloyan (smaloyan@sipex.com)

Part Number: SP6136ER1

Application Description: Digital Set Top Box (STB) Core Supply Voltage

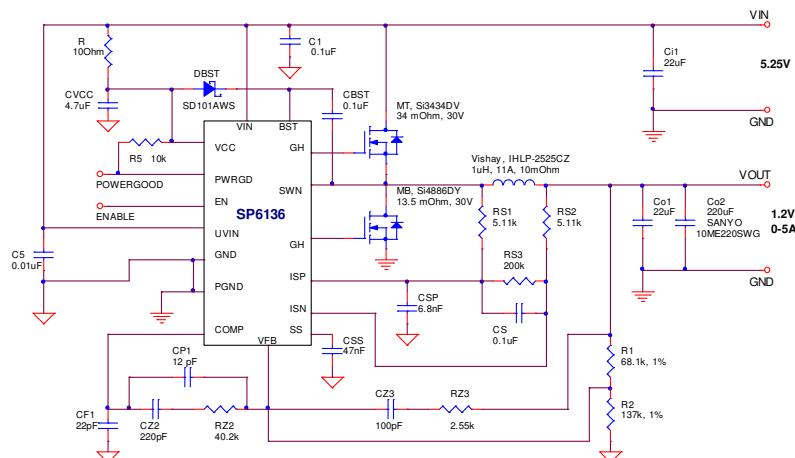

Electrical Requirements:

Input Voltage	4.5V – 5.5V
Output Voltage	1.2V
Output Current	5A

Circuit Description:

This buck converter has been designed to provide 1.2V output at 5A for powering a digital STB core supply voltage. Small form factor and low cost dictated the choice of the controller and external components. The SP6136 is a high performance buck regulator controller that provides all necessary functions required by a buck regulator: Over-current protection, Power-good output, adjustable UVLO and Enable input. The constant switching frequency (600kHz) optimizes against switching losses.

This report includes the application schematic and Figures 1 through 5 to illustrate electrical performance of the design.
